

ARPATEX SRL

COLLECTION AUTUMN/WINTER 2020/21

Eco Friendly

Dear Customers and Partners,

the autumn / winter 20/21 collection marks the beginning of our project for a sustainable and ecological world.

We are focused on a road map and bring Arpatex to produce fabrics using recycled material with a lower consumption and greater recycling of water, as well as an increasing use of organic fiber that comes from sustainable plantations.

All this of course through the certification of all the various production steps, from the raw material to the finished product and most of all with the collaboration of our valuable suppliers.

The Journey is still long and demanding, but we have already taken the first steps towards this ambitious goal. From this season there are already over 30 items in the new collection, marked eco-friendly and with headers made of recycled paper, in which we used eco-sustainable and recycled yarns.

These are our logos to identify these products:

Organic cotton yarn

We provide GOTS certification that cotton yarns used are BIO/ORGANIC

Recycled nylon yarn

In collaboration with our supplier Fulgar, qualities marked with this logo:

Q-NOVA® is an eco-friendly 6.6 nylon fiber obtained exclusively from regenerated raw materials and meets precise traceability requirements.

There will be more news within the end of the year and we'll be keeping you updated about it,so please also follow us on our new website: www.arpatex.it

We remain at your disposal,

Your Sincerely

Arpatex Team
